

Get to know Base4NFDI: we are a framework that develops, integrates, and sustains basic services for research data management across all domains and disciplines. We already have eight basic services in the Base4NFDI portfolio:

- 1) IAM4NFDI – Identity and Access Management
- 2) PID4NFDI – Persistent Identifier Service
- 3) TS4NFDI – Terminology Services
- 4) Jupyter4NFDI – Central JupyterHub service
- 5) DMP4NFDI – Data (and Software) Management Plans
- 6) KGI4NFDI – Knowledge Graph Infrastructure
- 7) nfdi.software – Research Software registry/catalog
- 8) RDMTraining4NFDI – Training and education service for RDM

Learn how they can leverage your research by supporting alignment of your workflows with the FAIR principles. This talk will also introduce you to the Base4NFDI process for initiating and maturing services (from initialization through integration to ramp-up). Finally, we want to map the requirements of your community to basic services and try to identify how your contributions can shape the next generation of basic services.
